GARDENING TIPS FOR OCTOBER

MARSHALL, TEXAS

- Buy your late winter and early spring bulbs.
- Divide and replant spring-blooming perennials such as daylilies, phlox, coneflowers, and daisies.
- Plant winter-hardy trees and shrubs. Plants set out now have more time to become established before spring growth.
- Harvest sweet potatoes, pumpkins, and winter squash.
- Remove all debris and dead plants to prevent overwintering of certain garden pests.
- Prepare garden beds for more fall planting; remember to mix in plenty of organic matter.
- Plant vegetable seeds such as: beets, broccoli, Brussels sprouts, cabbage, carrots, cauliflower, chard endive, kale, kohlrabi, lettuce, leeks, onion, parsnips, radishes, spinach, and turnips.
- Plant transplants such as: broccoli, Brussels sprouts, cabbage, cauliflower, chard, garlic, and lettuce.
- Begin planting spring-flowering bulbs such as tulips, crocus, and daffodils.
- Bring in all houseplants; check for pests before bringing them in for the winter.
- Continue to replant or establish cool-season lawns.
- For Bermuda lawns, apply 1 inch of water per week and a light application of potassium.
- Overseed established Bermuda lawns from midmonth through November for a greener winter lawn.
- Resume full fertilizing of roses as weather cools.
- Cut back watering for your plants as the days shorten and become cooler.

We are always looking for adult volunteers to be certified coaches. The Harrison County 4-H will pay for adult training. We currently are in need of a shotgun coach!

District 5 4-H SHOOTING SPORTS COACHES CERTIFICATION

Register on 4-H Online beginning **September 8** texas.4honline.com

The members of Texas A&M AgriLife will provide equal opportunities in programs and activities, education, and employment to all persons regardless of race, color, sex, religion, national origin, age, disability, genetic information, veteran status, sexual orientation or gender identity and will strive to achieve full and equal employment opportunity throughout Texas A&M AgriLife.

Planting Winter Forages

Late September-early October is the ideal time for planting cool season annual forages such as annual ryegrass, small grains (rye, wheat or oats) and/or cool season annual legumes. Anytime we are incorporating new forages into our production systems it is important to make sure to match the forage species to your location (soil type, average annual rainfall, intended use, etc). If you have questions about forages appropriate for your area contact your local county extension agent.

Three methods for establishing cool-season annual grasses include planting into a prepared seedbed, the light disking method and over-seeding or sod-seeding into undisturbed soil.

Over-seeding warm-season perennial grasses with cool-season legumes offers several benefits:

1. Grazing can begin 4 to 6 weeks earlier grazing in the spring, which reduces the winter feeding period.
2. Legumes typically have higher nutritive value than do most grasses.
3. Legumes fix nitrogen from the atmosphere and make it available to the pasture system.
4. A good stand of legumes can help control spring weeds by competing for space, water, sunlight and nutrients.
